

Near terminal passage, we have the Ladder dig extension, which in 1965 produced a further 1000ft. of passage. (15ft Scaling ladder at start.

There are many side passages, many going for over 100ft. Water re-emerges in Cheddar.

The Cave was discovered by Goddard and Barker of the U.B.S.S. in 1939. It contains some of the best fossil formations in the country, including helictites. It ranks as one of the finest in the area and until the discovery of St. Cuthbert's in 1953, was the most successful dig on Mendip.

LONGWOOD SWALLET

Longwood (Upper) series discovered 1944 by S.S.S.S. 1000ft.

August (Lower) series 1945 by U.B.S.S. 3,500ft. Depth 465ft.

Both parts have common entrance at 700ft.

Chimney, squeeze and crawl lead to boulder chamber. L is Longwood. R is August series.

- (a) Longwood Series. V.D.C.
(b) August Series. S.C.

NOTES

- (1) Full descent under wet conditions is very strenuous.
- (2) Lower parts of August flood in bad weather.
- (3) Boulder slopes in upstream galleries is very loose and dangerous.
- (4) Route is difficult to find on return.
- (5) Cuts should be treated with anti-septic.

MORE INFORMATION CAN BE OBTAINED FROM CAVES OF MENDIP OR
A SURVEY IN HISTORY OF MENDIP CAVING BY JOHNSON.
